### **Life in Review Paper:**

Overview: This assignment is designed to demonstrate your critical thinking skills. You will use concepts and information from the Online Educational Resource and other course sources to synthesize an evaluation of your human development to human development in general. This

assignment reflects your personal development. It may be helpful to consider the developmental domains: physical, emotional/psychosocial, and cognitive in addition to theories, theorists, and course vocabulary.

- Physical – biology interacting with environment, growth, aging, health
- Cognitive – language, ways of thinking, memory, education, learning
- PsychoSocial/Emotional – emotions, relationships, sense of self

For each stage of development, you need to describe elements of the lifespan common to that stage and apply those elements to your experience. Analyze your situation and compare it to anticipated circumstances for that stage of the lifespan. Synthesize (gather and organize) information from the Online Educational Resource and course material to evaluate how normative your incident was relative to expectations.

What can you conclude about your situation in terms of how closely it measured up to expected outcomes?

Think about a personal experience you had as a child, adolescent, and now as an adult. What in your development/experience caused you to have the experience or connect with the memories you have?

Explain your experience in terms of ideas and concepts you have learned about human development in each stage. Utilize information from your book, class lectures, PowerPoints, and any other outside academic source.

Further instructions and grading rubric are in Elearn or class.
